SPECIALIZED CARE

Long Lasting Relief from Sinus Pain

Complete Specialized Care

For more than 30 years Berger/Henry ENT Specialty Group has provided a wide array of treatments for conditions of the ear, nose and throat. Berger/Henry ENT specializes in:

- nasal and sinus disease
- nasal cosmetic surgery
- hearing and balance disorders
- snoring and sleep apnea treatment
- voice and swallowing problems

Lasting Relief from Sinus Problems

Traditionally people with chronic sinus problems had two choices: take continuous and often costly medication for temporary relief, or undergo extensive surgery and hospitalization.

Alan S. Berger, M.D., a Board Certified Otolaryngologist, was among the first physicians in the Delaware Valley to train in a revolutionary new procedure called Endoscopic Sinus Surgery—a procedure offering a long-lasting, safe and gentle cure from chronic sinus pain. Once treated, the vast majority of sinus problems do not recur and other allergic-based problems can be better managed.

Together with Doctors Morehouse, Becker, and Sesso, Berger/Henry ENT has since performed thousands of Endoscopic Sinus Surgery procedures and provided countless patients with immediate comfort and relief from chronic sinus pain.

EFFECTIVE PROCEDURES

SINUS DISEASE CAN EXHIBIT ANY NUMBER OF SYMPTOMS:

- Headaches
- Nasal discharge
- Bad breath
- Congestion
- Coughing
- Dental and eye pain
- Chronic sore throats

Using the latest technology, we can now detect and treat chronic sinus diseases that were previously undiagnosed through routine x-rays and physical examinations. This allows for early detection and advanced treatment of affected areas.

A Safe, Out-Patient Procedure

Endoscopic Sinus Surgery is usually performed on an out-patient basis under local sedation/anesthesia. There is little discomfort and no expected bruising or swelling, as no external changes are made. As a minimally invasive procedure, no nasal packing is required in most cases. Endoscopic sinus surgery offers you safe, gentle and long-lasting relief from sinus pain and is covered by medical insurance.

Endoscopy and Rhinoplasty

While the endoscopic procedure is not designed to make any changes in your outward appearance, it is possible to combine cosmetic rhinoplasty with an endoscopic procedure to refine and contour the shape of your nose. Combining these two procedures can decrease healing time as well as patient cost.

ELECTIVE PROCEDURES INCLUDE:

- Reducing/increasing the size of your nose
- Changing the shape of your nasal bridge
- Narrowing the opening of your nostrils
- Changing the angle between your nose and upper lip

MEET YOUR DOCTORS

MEMBER:

- American Academy of Otolaryngology—Head and Neck Surgery
- American Academy of Facial, Plastic and Reconstructive Surgery
- American Rhinologic Society
- Pennsylvania Academy of Otolaryngology

RECIPIENT:

- The Physician's Recognition Award for Continuing Education
